

Expert viewpoints: *Acinetobacter baumannii*

- “The numbers are not huge. If you look solely at bacteremias it’s less than 1%. It’s well below even the *Enterococcus*. However, it’s a major problem in ICU ventilating pneumonias. It’s a clonal organism so you tend to get the same strain spread among lots of patients and that can create a panic and a need to close the ICU. There is some associated mortality and there are strains circulating that are resistant to near everything except maybe polymixin.” – **UK opinion leader**
- “There are two strains circulating in and around London at present. One of them has been in seen 50-odd hospitals and the other just under 50. Both resistant to Carbapenems, Cephalosporins, Quinolones, Aminoglycosides you name it. It’s susceptible only really to polymixin, colistin and tigecycline.” – **UK opinion leader**

About VacZine Analytics:

VacZine Analytics is a brand new research consultancy based in the United Kingdom. Its aim is to provide high-quality disease and commercial analysis to those working within or in collaboration with the vaccine industry.

With our product lines:

- © DiseaseINFOPACK
- © OpportunitySCAN
- © MarketVIEW
- © ExpertREACT
- © VaccineSTATS

Our key focus is helping clients to build the case for developing new vaccines.
