

Expert viewpoints: should a Staph vaccine target CA-MRSA?

“Well I think if you asked me that question five years ago most of us would say it needs to target hospital based infections, hospital acquired infections – that is the vast majority. But I think the whole scenario has changed. Although most of the serious infections are now still in the hospital, more and more we are seeing community-acquired infections. People in the hospital having procedures and things like that should be the first target. But I think if it can target community-acquired infections that would be icing.”

– **US opinion leader**

“I would tell you what I have told on many occasions before. Nothing in my professional career, after so many years in infectious diseases have had the relative effect of community-acquired MRSA. In children, by far this is more important than pneumococcal and Neisseria meningitis. ”

– **US opinion leader [pediatrician]**

About VacZine Analytics:

VacZine Analytics is a brand new research consultancy based in the United Kingdom. Its aim is to provide high-quality disease and commercial analysis to those working within or in collaboration with the vaccine industry.

With our product lines:

- ② **DiseaseINFOPACK**
- ② **OpportunitySCAN**
- ② **MarketVIEW**
- ② **ExpertREACT**

Our key focus is helping clients to build the case for developing new vaccines.
