

Temporary/Part time associate healthcare analysts, Summer 2022

VacZine Analytics (www.vaccine-analytics.com) specializes in vaccine commercial opportunity assessments/forecasting and new product R&D strategy via its premium syndicated research portfolio (www.vaccine-analytics). **VacZine Analytics'** clients range from the small biotech, supranational donor organisations, right through to the major players in manufacturing and supply. Our work has been instrumental to our clients, providing inputs to high profile merger and acquisitions, strategic alliance activities and early product commercialization.

Due to company expansion we are seeking a range of part time/temporary Associate Analyst roles to begin in Q4 2022/Q1 2023. Well matched candidates can be upgraded to full time roles in 2023.

Duties and tasks will include:

Contribute to authoring VacZine Analytics research products for syndicated publication

Contribute to ongoing client driven ad-hoc research projects

Liaise with international experts/KOL regarding ongoing project inputs

Liaise with Business Development Team on client queries/sales & marketing activities

Skills/attributes required:

Essential: Experience in desk-based secondary research and analysis techniques in healthcare or scientific research/discipline

Essential: Demonstrated knowledge of healthcare industry, research and development, scientific research/discipline

Essential: Intermediate working of Microsoft® Office Suite: Outlook, PowerPoint, Excel & Word. Able to make slides/tables/graphs to prescribed format

Essential: familiarity with academic literature, scientific nomenclature and technical concepts, preferably in infectious diseases (or related topics). Database searching techniques.

Essential: Excellent written/communication/teaming working skills. Able to conduct/participate in Zoom/MS Teams meetings. Able to meet specifications/timeframes

Qualifications/Experience:

BSc in science subject, science-related subject.

Foreign language(s) will be considered an advantage

Person profile:

Role would ideally suit an energetic/ambitious new graduate seeking work experience/first role in a smaller meritocratic company environment. Ideal role to exercise creative flair, develop new ideas and gain international experience in vaccines and infectious diseases. Previous work experience in similar roles will be considered advantageous.

Compensation/benefits:

Attractive (compensation is role-dependent/task dependent[#]) Flexible working arrangements. High level of autonomy offered. High exposure, close interaction with management team/business decision makers.

**The Company is not accepting agency referrals at this time nor shall be liable for any fees pertaining to these opportunities from a Third-Party*

for task dependent work rate is £17.50 per hour

Please note: at this time we are not accepting any agency referrals
